“Bayesian MCMC to refine estimates of elephant origins from poached ivory”

I am working to improve inference of the origin of poached ivory specimens based on genetic analysis, so that areas of poaching can be more accurately identified. I am also interested in the natural history of the hybrid zone between forest and savannah elephants.

Questions? Contact Brian Giebel at bgiebel@uw.edu or visit the Combi website at <http://www.gs.washington.edu/news/combi.htm>
