Dr. Joseph DeRisi
Co-President of the Chan Zuckerberg Biohub
Professor of Biochemistry & Biophysics, UC San Francisco

“Genomics and Infectious Disease”

DeRisi Lab:

The DeRisi Lab focuses on genomic approaches to the study of infectious disease. Specifically, we are studying *Plasmodium falciparum*, the causative agent of the most deadly form of human malaria. We are also involved in a major effort for the discovery of new viral pathogens associated with diseases of unknown etiology.
