SCIENTIST

Description

Responsibilities:
- We are seeking a highly motivated scientist for a new research and development program in carbohydrate production in genetically modified cyanobacteria.
- The scientist will be the research lead in a collaboration with a major industrial partner to bring specialty carbohydrate production to market.
- The successful applicant should have a strong understanding of intermediary metabolism and microbial genomics, and be technically proficient in molecular genetics.
- A major portion of the work will involve strain construction and characterization, including growth analysis and biochemical profiling.

Qualifications:
- The ability to work independently, as well as in a team-oriented environment, excellent organizational, written, verbal, and computer skills are essential. Additionally, the candidate is expected to contribute freely to the team research environment in a manner conducive to the success of the research project as a whole.
- The candidate will have a Ph.D. in cell or molecular biology, or a related field. Pre or post-doctoral experience in microbiology may be helpful.

Job Function: Research & Development
Primary Location: Seattle, Washington

Interested candidates should send a cover letter and resume to jobs@matrixgenetics.com.
