“Cardiac Organoids Unveil Novel Mechanisms Associated with Heart Development and Disease”

Our goal is to identify the complex genetic and molecular mechanisms involved in cardiovascular development and to understand how their perturbation can lead to disease. Ultimately, we hope to make personalized medicine a reality for those that suffer from CHD and associated comorbidities, such as autism.

Questions? Contact Brian Giebel at bgiebel@uw.edu or visit the Seminar website at http://www.gs.washington.edu/news/seminars.htm

The University of Washington is committed to providing access, equal opportunity and reasonable accommodations in its services, programs, activities, education and employment of individuals with disabilities.
